

MOTO-SAW ADVANTAGES

VERSATILE: MOTO-SAW is the only electrically driven hand jigsaw on the market today. For the money invested, it is the most versatile tool that you can possibly add to your work shop. With it you can saw most any intricate design, cut at any desired angle and also on assembled projects.

POWERFUL: The magnetic motor develops 7,200 strokes per minute, cutting at high speed at an average of 12" per minute through medium hard wood or other material from $\frac{1}{8}$ " to $\frac{3}{4}$ " thick.

SIMPLE AND DURABLE: MOTO-SAW is sturdily built, has only two moving parts, has no shafts, cranks, bearings or cams to wear and therefore does not require oiling. With ordinary care, it will give you many years of service.

LIGHT IN WEIGHT—LARGE CAPACITY: MOTO-SAW weighs only 17 ounces. You can cut through the center of panels up to 19" wide. There is no limit to the length it will handle. You can saw sideways as well as forward and backwards.

SAW BLADES: Only top quality blades are used, yet they cost no more than others. The entire length of saw blades can be used with MOTO-SAW—unlike other power saws. Saw cuts are only about the width of a pencil mark, and perfectly smooth, requiring no sanding.

SAFE: MOTO-SAW is as safe to use as a hand saw. A slight pressure on the automatic switch, in the handle, instantly stops and starts motor.

ECONOMICAL: You pay only \$5.85 for MOTO-SAW with 3 saw blades—a remarkable power tool saving! Current consumption is about 75 watts.

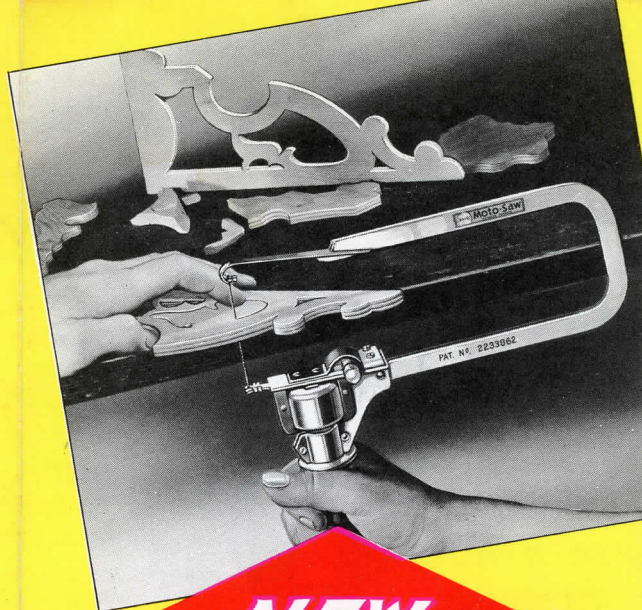

GUARANTEED: MOTO-SAW is guaranteed against faulty material and workmanship. Made by the makers of the famous "MOTO-TOOL" line, known the world over, and backed by 20 years of experience in the design and manufacture of electrical appliances, MOTO-SAW is worthy of your trial. Once tried—you'll never part with it.

Now you can have all the fun of fine, fast jigsaw work without any of its drudgery or difficulty. Simply steer the lightning-fast blade and see it seemingly melt its magic way through hard or soft wood, building compositions, bakelite or other plastics. Use it for the most intricate designs you could do with a costly, cumbersome power saw. Use it for work at any angle, either at the bench or on assembled jobs. Cut spirals like airplane propellers or irregular curves in complex carving. Use it for fabricating corner shelves, silhouettes, cabinets, panels and patterns, or any such work in natural or synthetic materials. Carry it to the job in your coat pocket, plug it into any electric outlet, store it in less space than a shirt. Work many times faster than ever was possible with any freehand saw. Work to a finish many times finer than ever was possible with any jigsaw at any price. Enjoy this modern miracle now; see the MOTO-SAW.

MOTO-SAW HAS UNLIMITED CAPACITY

With MOTO-SAW you can cut through the center of panels up to 19 inches wide. There's no limit to the length it will handle. The secret of this amazing performance lies in the new 4-way blade holder which permits reversing the blade or turning it at right angles to the saw, either to the left or right. Thus you can saw sideways as well as forward and backward.
